General

Full screen mode

To change to full-screen mode, or to change back from it (i.e., to have the application in a smaller, movable and resizable window), select **View > Full Screen** from the menu.

Note that in full-screen mode, the application will occupy the entire screen area. Some system interface components, such as menu bars and task bars/docks, may be temporarily hidden in this mode, and require the mouse to be moved to the top or bottom of the screen to reveal them.
