How to use Fade In on a Chromebook

Although Fade In does not currently run directly on Chrome OS, there several ways to run Fade In on a Chromebook at the moment. (Chrome OS is essentially an operating system where the Chrome web browser functions as the user interface, and applications run as web pages.)

Intel-compatible Chromebooks can run the Linux version of Fade In if you are able to run the Linux operating system on your Chromebook. Note that running Fade In for Linux on ARM-based Chromebooks is not currently supported. Please see this article.

You can also use Fade In Access in a browser on any device, including a Chromebook.

(As an an alternate method, it may also be possible to use Crossover or Wine to run the Windows version of Fade In.)
