Getting Started

Installing on Linux

Download the appropriate package for your Linux installation:

- .deb - Debian and Ubuntu
- .rpm - Fedora and SUSE
- .tar.gz - General installation

Either open the package from the command-line as appropriate for your system (i.e., using dpkg, rpm, or tar), or use a GUI utility.

The program will be installed to /usr/bin/fadein, with resources in /usr/share/fadein/.

Please ensure that you have quit any currently running copy of Fade In before installing.
