

Formatting

Bold Scene Headings appear as bold-italic in PDF (Linux)

If your Scene Heading elements are **bold** but appear as ***bold-italic*** when selecting **File > Save As PDF**, it is likely due to a Linux-related font matching/substitution issue.

Until this issue is properly resolved, you can work around it with a single extra step by using **File > Print** instead, and printing to a PostScript (.ps) file instead. You can then use the command-line tool [ps2pdf](#) to convert the PostScript file to PDF.
