## Non-standard title page formatting

**[Please note that this information is outdated as of version 2, and is retained here for archival/reference purposes only.]**

It is possible to create a title page without using the built-in Title Page editor (which follows the standard screenplay title page format).

Go to **Document > Page Numbers > Page Numbering** and change **Start numbering from** to 0. Uncheck **Show on first page**.

Now you can edit the first page of your document however you'd like the title page to appear, and your screenplay itself will begin on the second page (numbered page 1).
