

General

Dictionaries for additional languages

Fade In Professional Screenwriting Software is compatible with many third-party dictionaries, including French, Italian, Spanish, German, Russian, and many, many more. Links to these can be found on the **Download** page at <http://www.fadeinpro.com>. Click on **Extras**.

To install additional language dictionaries for Fade In Professional Screenwriting Software, download the appropriate file(s) from one of the listed sites. You may need to extract/unzip the package: what you want are both **.dic** and **.aff** files for any given language.

From an open document in the application, select **Document > Check Spelling**, and from the language choice drop-down, selected **Install/remove**.

Click the **Install** button, and select the dictionary (**.dic**) file that you want to install. (Repeat for multiple languages, if desired.)

Note that some dictionaries are distributed in the **.oxt** Open Office Extension format. In order to open these, just rename to **.zip**, and open as you would a zip archive to find the **.dic** and **.aff** dictionary files.
