Can Fade In open Movie Magic Screenwriter screenplays?

Fade In Professional Screenwriting Software cannot, currently, open Movie Magic Screenwriter (.mmsw) documents directly. Unfortunately .mmsw is a closed, proprietary format and the makers of Movie Magic Screenwriter provide no information or support for third-party software attempting to work with that format.

Currently the best method for importing from Movie Magic Screenwriter is to export from MMS in a format such as rich text format (RTF) or formatted/unformatted text, then import that file into Fade In.

Unique solution ID: #1044
