

General

Where are autosave files located?

If you have backups enabled under **Preferences > General**, period backups will be saved of your work. Where they are saved depends on the operating system.

(**Note:** When viewing the list of backup files, your computer may show them in other than date order. It's best to view them in reverse date order to see most recent backups first.)

Generally you can locate the autosave folder by selecting **File > Recover Backup**. If for some reason that doesn't work, however, you can manually navigate to the backup folder:

Windows

C:\Users\<Username>\AppData\Roaming\Fade In

To manually go to this folder from the Recover Backup dialog, enter **%APPDATA%\Fade In** in the **Filename** text field. (To go to this folder in the File Explorer, click in the address bar to paste the path.)

Mac

/Users/<Username>/Library/Application Support/Fade In

or

**/Users/<Username>
/Library/Containers/com.generalcoffee.fadein/Data/Library/Application
Support/Fade In/** (Mac App Store version)

To manually go to this folder from the Recover Backup dialog, first press the forward slash (/) key (or **Command+Shift+G**) then copy and paste the appropriate path as per the above, replacing <Username> with your own user name. You can use "~" to stand in for "/Users/<Username>", as in "~/Library".

To go to this folder in the Finder, choose **Go > Go to Folder** from the Finder menu.

Note that the user "Library" folder is typically not visible in Finder, so you can normally not browse directly to it and will have to enter the full path as per the above. Alternatively you can choose **Go** from the Finder menu and hold down the **Option** key to show the hidden Library folder.

Linux:

~/fadein
