How to use Fade In on a Chromebook

Although Fade In does not currently run directly on Chrome OS, there several ways to run Fade In on a Chromebook at the moment. (Chrome OS is essentially an operating system where the Chrome web browser functions as the user interface, and applications run as web pages.)

Intel-compatible Chromebooks can run the Linux version of Fade In if you are able to run the Linux operating system on your Chromebook. Please see [this article](#).

(As an an alternate method, it may also be possible to use [Crossover](#) to run the Windows version of Fade In.)
